PROFILE

Junior AI Engineer and Computer Science student with strong hands-on experience in machine learning, deep learning, and computer vision. Skilled in building intelligent systems using Python and modern AI frameworks. Experienced in developing real-world AI applications, including NLP systems and predictive models. Seeking to contribute to impactful AI-driven solutions while growing in a professional environment.

EDUCATION

Misr University for Science and Technology 09/2022 – 06/2026
Bachelor of Science in Computer Science Major: Artificial Intelligence Giza, Egypt
GPA : 3.4

PROFESSIONAL EXPERIENCE

Data Science Intern (IBM Track) 11/2024 – 05/2025
Digital Egypt Pioneers Initiative (DEPI) – MCIT

- Completed intensive Data Science training under the IBM Track (MCIT – DEPI)
- Applied machine learning techniques on real-world datasets, including preprocessing, feature engineering, and model evaluation
- Built and evaluated classification models using Scikit-learn
- Performed exploratory data analysis (EDA) and data visualization using Pandas, NumPy, and Matplotlib

SKILLS

Technical Skills

- Programming & Data: Python, Pandas, NumPy, PyTorch, TensorFlow
- Machine Learning: Scikit-learn, Classification, Regression, Feature Engineering, Model Evaluation
- Deep Learning: CNNs, RNN, LSTM, GRU
- Computer Vision: OpenCV, Object Detection, Face Recognition, OCR

Soft Skills

- Problem Solving & Analytical Thinking
- Teamwork & Collaboration
- Communication of Technical Concepts
- Time Management

PROJECTS

Patient Medical History System with Fingerprint Identification

University Graduation Project

- Developed a smart healthcare platform for managing patient records with biometric authentication
- Integrated multiple AI models for medical image analysis, including bone fracture, brain tumor, stroke, and pneumonia detection
- Built an NLP-based API for medical text simplification to improve understanding of prescriptions and reports
- Enabled doctors to manage patient data and communication through a scalable web-based system

Automated National ID Data Extraction System

- Developed a computer vision pipeline to extract key information from Egyptian National ID cards
- Used YOLOv8 for region-of-interest (ROI) detection to identify and isolate relevant fields from ID images
- Integrated OCR techniques to convert extracted regions into structured text data
- Designed the system to automate data entry into structured formats (e.g., Excel), reducing manual processing

Multi-Model AI System for Real-Time Threat Detection and Compliance Monitoring

- Developed a smart CCTV system for real-time safety and security monitoring using computer vision
- Integrated two YOLOv8 models in a single pipeline for face mask compliance and weapon/violence detection
- Designed a rule-based violence flag system to trigger high-priority alerts upon detecting lethal objects
- Reduced false positives by 15% by curating a combined dataset of 5,000+ images to distinguish smartphones from weapons.

CERTIFICATES

- Digital Egypt Pioneers Program (DEPI)
- Presenter, Arab Institute for Advanced Technology
- GIG Egypt (Gulf Insurance Group)
- DeepX 2026 Hackathon – Top 5 Finalist
